Catalog Loading Synchronization

Description

- Data synchronization between SARSS and CCSS
- Catalog data to be loaded on the effective date (AR 708-1)

Current Status

- VIOC loaded in accordance with the SOE with no problems. Expect future loads to occur at SARSS on the last working day of the month.
- Metrics team validated load date at Fort Hood.

Issues

- CCSS is program logic driven. Catalog data is loaded in advance but not used until the effective date (1st day of the month)
- SARSS receives catalog data prior to the effective date (mid month). Some sites load on receipt some on last day of the month.

Readiness for MS3 Implementation

- Overall Readiness Ra **Green**

Issues Affecting Implementation Readiness Rating
- **None**
